SHERIFF

PHIL JOHNSTON
ASSISTANT SHERIFF

TEHAMA COUNTY EMERGENCY OPERATIONS CENTER PRESS INFORMATION

TYPE OF INCIDENT: Return of hot temperatures to the Valley this week Monday 06/22/20 to Saturday 06/27/20

Date: 06/22/2020

Agencies: Tehama County Health Services Agency - Public Health, City of Red Bluff, City of Corning, City of Tehama, Tehama County Emergency Operations

Cooling Location

The heat is returning to the North State, Monday June 22nd to Saturday June 27th with temperatures hovering during the day around 109 degrees Fahrenheit in the Red Bluff area. Extended heat waves can affect an individual's health and should be taken seriously. It is important to be able to cool off periodically during an extended heat wave.

Public buildings can provide respite from the high heat during the day. A Cooling Location allows affected people to get out of the heat for a period of time to let your body cool down. Cooling Locations in Tehama County commonly include libraries and community centers. Cooling locations do not offer snacks or water, only air conditioned

facilities. Tehama County Cooling Locations are limited this year due to COVID-19. The County of Tehama has only one location currently large enough and equipped properly to be used as a limited population Cooling Location:

Red Bluff Community Center - 1500 S Jackson St, Red Bluff, CA 96080 (Monday-Friday 8 am to 5 pm)

When using a Cooling Location follow guidelines for physical distancing and increased hygiene during COVID-19. Residents are asked not to enter a Cooling Location or other public buildings if they are ill and are asked to wear a mask.

As the County of Tehama continues to move forward with full reopening of other businesses, additional locations will include the Red Bluff Public Library, Los Molinos Public Library and Corning Public Library as they become available for additional Cooling Locations during normal business hours.

During times of excessive heat remember to drink plenty of water to stay hydrated, stay indoors where it is cool, pace yourself and wear appropriate clothing and sunscreen when outdoors and take frequent breaks. Check on your friends, family and neighbors as the heat can be tough on the elderly and those with medical conditions. Provide shade and plenty of water for your pets and livestock.

Please check with local weather and news for more and current weather related events.
